Portfolio

[Jose Moreira Portfolio](#)

AI, MLOps & LLMOps projects, experiments and labs.

SKILLS

- Kubernetes (EKS, IKS, OpenShift/ROKS, GKE), Docker, containerd
- Cloud: AWS (EKS, EC2, S3, IAM), GCP (GKE), IBM Cloud (IKS, ROKS)
- Infrastructure as Code: Terraform, Ansible, Helm, CloudFormation
- GitOps & CI/CD: ArgoCD, FluxCD, GitHub Actions, GitLab CI, Jenkins, Harness
- Observability: Prometheus, Grafana, OpenTelemetry, distributed tracing, CloudWatch
- SRE practices: SLOs, SLIs, error budgets, incident response, on-call, postmortems, MTTR
- Security & Policy-as-Code: Kyverno, OPA, Falco, Nessus, CIS Benchmarks, Linkerd service mesh, Authorization Policies
- Compliance: FedRAMP, ATO documentation, secure SDLC
- Databases: PostgreSQL, MySQL, Redis, Cassandra
- Streaming & Messaging: Kafka
- Scripting: Python, Bash
- LLMOps & AI Stack: LlamaIndex, LangGraph, RAG, Vector DBs (FAISS, ChromaDB), Comet Opik, Ollama, Claude Code, MCP, Dagster orchestrator
- Databricks (admin, LLMOps workflows)

CERTIFICATIONS

- LLMOps with Databricks, Maria Vechtomova (Cauchy), 2026

PROFESSIONAL SUMMARY

Senior Site Reliability Engineer (SRE) with deep DevOps, platform, and security background. Founding contributor to Sysdig's FedRAMP authorization, with hands-on expertise in Kubernetes (EKS, IKS, OpenShift/ROKS), GitOps, policy-as-code (Kyverno, OPA), service mesh, and multi-cloud observability across 36+ production clusters. Embedded SRE on Sysdig's Sage AI team — designs reliability and observability frameworks for production LLM/AI workloads.

EXPERIENCE

● Senior Site Reliability Engineer

Jun 2021 – Present

Sysdig Inc

- Drove cluster-wide Kyverno policy-as-code rollout to production — designed admission policies, governance baselines, and exception workflows; replaced ad-hoc validation across hundreds of workloads with auditable, GitOps-managed guardrails.
- Decommissioned Atlantis from the Terraform pipeline and migrated IaC workflows to GitHub Actions — reduced operational toil, eliminated long-running stateful infrastructure, and tightened drift detection.
- Led upgrade and lifecycle automation across 36+ multi-cloud production clusters (AWS EKS/Kops, IBM IKS/ROKS, GCP GKE), codifying pre-flight and remediation workflows that reduced upgrade risk and platform incidents.
- Founding member of Sysdig's FedRAMP compliance initiative — owned Linkerd service-mesh rollout, Authorization Policies, and Terraform/Helm-based service health automation that achieved and sustained ATO across multi-cloud production.
- Embedded SRE on Sysdig's Sage AI team — designed observability frameworks, AI-specific SLOs, and automated validation pipelines for LLM-powered features in production, translating model behavior into actionable reliability improvements alongside ML engineers, data scientists, and AI architects.
- Core member of Sysdig's Security organization — drive vulnerability management, hardening, and continuous compliance across SaaS and FedRAMP production environments, minimizing attack surface across multi-cloud infrastructure.
- Hardened datastore infrastructure (PostgreSQL, Redis, Cassandra) against CIS Benchmarks using Ansible and Terraform — strengthened security posture and reduced critical findings.
- Architected dedicated-tenant infrastructure for the Goldman Sachs enterprise deployment, ensuring isolation, compliance, and operational stability for a flagship financial-services customer.

● Site Reliability Engineer

Jul 2020 – Jun 2021

Ooma Inc

- Designed and deployed the Systems Status website on OpenShift using Terraform and Jenkins, providing real-time service-health visibility to internal teams.
- Introduced SRE practices — incident runbooks, automated alerting with Prometheus — that reduced service outages and improved operational efficiency.
- Expanded SMB systems for scalability and performance; deployed and configured NTP servers ensuring accurate system time sync across the fleet.

● Data Analyst — SRE Data Team

Jan 2018 – Apr 2020

Netskope

- Optimized 550+ Redis databases globally, eliminating outages and improving reliability across the fleet.
- Implemented Prometheus & Grafana for database monitoring and alerting, replacing manual checks with SLO-driven observability.

- AI Solutions Architect, Doctor Duc Haba (ELVTR), 2026
- AI Practitioner, AWS, 2025
- Machine Learning DevOps Engineer Nanodegree, Udacity, 2025
- Machine Learning in Production, DeepLearning.AI, 2025
- Certified Kubernetes Administrator (CKA), Linux Foundation, 2024
- GitOps Certified for Argo, CodeFresh, 2024
- Prometheus Certified Administrator (PCA), Linux Foundation, 2023
- Certified Kubernetes Application Developer (CKAD), Linux Foundation, 2021
- Cloud & DevOps Continuous Transformation, MIT, 2021
- Terraform Associate, HashiCorp, 2020
- AWS Solutions Architect Associate, AWS, 2020
- Continuous Delivery & DevOps, Univ. of Virginia, 2019
- Databases & Data Analytics, UCSC, 2017

- Contributed to Netskope's FedRAMP Authorization using Terraform on AWS, codifying compliant infrastructure baselines.
- Built and administered a Kubernetes testing environment that enabled faster, more reliable deployments for the SRE team.

● **Senior Technical Support Engineer**

RedisLabs (Redis Inc.)

Apr 2016 – Jan 2018

- Troubleshot complex Redis software issues for enterprise customers, partnering with engineering on root-cause analysis.
- Implemented Zendesk and standardized escalation handling, improving response SLAs and cross-team handoffs.
- Improved onboarding for new engineers, reducing time-to-productivity.

● **IT Architect / DBA**

Know-How (Uruguay)

Dec 2010 – Jun 2015

- Provided DBA and infrastructure support for government electronic platform services.
- Conducted data-quality evaluations and drove standardization across critical platforms.

EDUCATION

Bachelor in Computer & Communications Engineering, with Honors

Dublin Institute of Technology

Jan 2007

Diploma in Electronics Engineering

ORT University

Jan 1998

WORK AUTHORIZATION

U.S. Citizen
